

GXS TrustedLink® for i

Tli and Oracle® JD Edwards

Why Tli?

For almost 20 years, the JD Edwards (JDE) division of Oracle® and GXS have partnered to provide a seamless and proven ERP and EDI solution.

GXS TrustedLink for i (Tli) is the leading data transformation software for the IBM i platform. Tli simplifies your trading partner communications by converting internal application data formats to and from Electronic Data Interchange (EDI) formats or other formats (XML, flat file and CSV) and executing the translation processing between you and your business partners.

Ease of Use—Tli's Visual Mapper enables you to deal with complex trading partner mapping requirements by providing an intuitive interface to define mapping for standard business documents in the formats you need. When upgrading JD Edwards, the Visual Mapper provides detailed information showing how changes to the System 47 file layouts might affect your existing maps.

Data Management—Designed especially for the IBM® i platforms, Tli optimizes the platform's efficiency and architecture to support enterprise-level volumes of data and ensure maximum performance. Advanced archiving speeds transaction processing by moving historical data to online or offline archive storage.

KEY BENEFITS

- Easy integration with the System 47 files of EnterpriseOne and World
- Visual Mapper tool for dealing with complex partner mapping requirements
- Advanced archiving options speed transaction processing
- Improve efficiencies and visibility with a single point of control
- Easily and securely communicates across multiple environments.

The IBM logo and the Business Partner emblem are trademarks of International Business Machines Corporation in the United States, other countries, or both. The letters "IBM" are also a registered trademark and are often used to identify the corporation and its offerings. Oracle is a registered trademark of Oracle Corporation and/or its affiliates. Other names may be trademarks of their respective owners.

Customer Satisfaction and Value—TLi is one of the best values in the e-commerce market. Many JD Edwards customers are happy to trust TLi with their critical business transactions. When you consider the TCO, including hardware acquisition and maintenance, software licenses and support, personnel and facilities expenses, TLi is a very cost competitive solution.

Visibility—TLi's Transaction Center offers a powerful document management area to access, view and track inbound and outbound documents. This single point of control of transactions allows you to administer and monitor all aspects of your trading environment, including acknowledgments, audit trails and reports. Transactions can be easily found or grouped using document-specific data from JD Edwards EnterpriseOne or World.

Performance—TLi is flexible enough to support a large, multinational organization with thousands of trading partners as well as a small company just beginning an EDI program. No matter what communication and security capabilities you're seeking, TLi can meet your trading partner needs. Whether you require data communications via a value-added network, FTP, or over the Internet, TLi easily and securely communicates in these environments.

TLi Templates for JD Edwards

The TLi templates for JD Edwards provide the basic application file layouts and mapping for documents supported by JD Edwards EnterpriseOne and World. JD Edwards provides the System 47 group of files that are used for inbound and outbound EDI documents. TLi templates are created with System 47 file layouts of specific JD Edwards application releases for the most widely used ANSI ASC X12 transaction sets. During the template installation process, TLi installs and compiles translation formats with mappings for selected inbound and outbound EDI documents, along with the corresponding user file definitions and logical files. Templates provide a guideline for you to complete your mapping to meet your business and trading partner requirements.
